

Settings

Here are described some basic settings for QVM-W3, which are available via the **...** **Settings** in the start window.

Under **UNITS** you can select different display options of the coordinate system **DDDDD** **DDMMM** **DDMMSS** **UTM** and the unit **Metrisch** **Nautical** **English**.

With a click on **GPS** you can select between energy saving functions of the OS, you can have your position being centered automatically, you can also adjust the resolution (low/intermediate/high) of the active tracklog.

Under **NAVIGATION** there are three options:

- Show shortened instruction Yes/No
- Recalculate route automatically Yes/No
- Auto zoom Yes/No
- Activate speech Yes/No

Also you can set the size for navi-infos from **XS** to **XL** and you can change the Symbol from the typical QV arrow.

The tab **FIND OPTIONS** has the following options:

- In the **Radius km** area, you can specify the radius to be searched for. A search is made between 2 and 5000.
- **In fields** you can chose between Name, Info o Name + Info.

The tab **FIND OPTIONS MAP** has the following options:

- **Where** to search. All, Database, Online OSM or Current map.
- The **Region** indicates the area in which you are searching for. Current mapdetail, Radius around map cursor or Radius around location.

Under **Map** there are five options:

- Get Adress at Cursor
- Display coordinates of map center
- Satutsbar visible
- Tile download only with wifi
- Show debug infos

MAP SCALING sets the Global scale factor between **XS** an **XL**.

Under **NEW WAYPOINT** there is the option to set the name scheme of new waypoints.

DATABAS creates MyData and the SampleMaps new at start.

At **ACCESS KEYS**, three keys can be assigned:

QMZ-Mapkey

The QMZ-Mapkey is necessary for the map export from [QVC]. It is associated with the smartphone and is written encrypted in QMZ with the export of the map from version [QVC]-Version 7.1.0.31. Important!!! You should keep this key at a safe place, otherwise the encrypted QMZ maps cannot be displayed on the device anymore.

You can also select an own key!

QV-Shop maps

My QV-Shop will enter your access data to the QuoVadis Shop. Than you are able to download maps in QVM, bought in the QuoVadis Shop.

easyROUTES-Portal

You are a subscriber of the Motorrad- oder Tourenfahrer magazine and registered? Then you can utilize the [tour data base](#) in QVM-W3 and in the Tourenfahrer App ERM-! Just enter your login data **permanently** into the two fields to search for tours with the function [find](#) from QVM.
